

## Any place, any time, any device; mobile working for your users

Get on any train and everyone will be looking at a tablet or a phone, maybe playing Candy Crush or keeping up to date with Facebook.

Your employees are part of this group. Imagine how much more productive they would be if they had the freedom to work seamlessly from any device in any place?

The familiarity of the Microsoft Office Suite will enable your users to be up and running with mobile working, quickly and effectively. Microsoft's device and app management tool, Intune, will enforce the security of devices before allowing users to access

corporate data. Multi-factor authentication is also available to ensure that the user accessing apps on a device is permitted to access corporate content and doesn't fall into the wrong hands.

### SAFE, SECURE AND COMPLIANT

The management and monitoring of devices accessing corporate content is a crucial component in organisational security. **Microsoft 365** provides the IT department with the tools to remotely manage devices, apps and policies and to easily monitor the compliance of the devices.

**Microsoft 365** enables your organisation to secure devices, publish apps and, if the worst comes to the worst, remotely wipe applications or even the whole device.

#### 1. IN THE OFFICE

Working on files using Microsoft Office Suite on a Windows machine

#### 2. OPEN EMAIL ON TABLET

Unlock device  
App PIN  
Multi-factor authentication

#### 3. OUTLOOK ON TABLET

Looks and feels the same as the familiar desktop version

#### 6. OPEN WORD

Recent files are visible and are the same as the files that were open on Windows machine

#### 5. SAVE - ONEDRIVE FOR BUSINESS

Can only save content to "trusted apps" that are defined by the organisation

#### 4. OPEN ATTACHMENT IN WORD

Word functions in the same way on a tablet as it does on Windows

#### 7. FORGOT TABLET

User forgets tablet on train!

#### 8. REPORT LOSS TO IT

Contact IT and let them know the phone has been lost

#### 9. IT REMOTELY WIPE DEVICE

IT can remote wipe the whole phone or only the corporate content on it

## MOBILE PRODUCTIVITY

-  **Device security**  
Before being allowed to connect to corporate content, devices must adhere to security criteria such as having a PIN. These criteria are defined by the organisation.
-  **Identity**  
Users sign-in with the same corporate identity to access trusted apps as they do in the office. Multi-factor authentication can be enforced to double check the identity of the user.
-  **Mobile apps**  
The organisation can define 'trusted' apps that are permitted to access corporate content. Data cannot be moved from a trusted app to a personal app.
-  **Synchronisation**  
The apps that work with Microsoft 365 synchronise data between all devices, e.g. recent files in Word are the same on Windows and a mobile device.
-  **Remote wipe**  
The organisation can remotely wipe the corporate data stored on a device leaving all personal data, or can completely wipe a corporate device.

## PLANNING

We understand the need to discover the requirements of your organisation, including the nature of your business, company culture and your perceived threats related to security and compliance.

We will work with you to agree a vision of how your organisation wants to work in the future and understand your priorities to provide a stepped approach to implementing the changes, both technically and as an extension of your corporate culture.

## ADOPTION

The implementation of security and compliance within an organisation is a complex process due to the impact on end users.

It is essential that users understand change is on the way, and more importantly, the benefits that change will bring to the organisation and to them personally.

Whether you are starting from a position of no policies and introducing them for the first time, or have existing policies and are changing the way they are enforced, CPS are experts in supporting your users in adopting the working practices to apply your policies.

## WHAT IS MICROSOFT 365?

**Microsoft 365 is a suite of products that includes Office 365, Windows 10 and Enterprise Mobility and Security.**

Windows 10 offers a secure desktop environment that seamlessly integrates with the security and device management policies of an organisation, including password-free login.

Office 365 is Microsoft's flagship productivity suite including, among others, Exchange Online, OneDrive for Business, SharePoint Online, Skype for Business and Yammer.

Enterprise Mobility and Security provides advanced security and compliance tools and device and application management tools such as Intune, Azure Active Directory and Azure Information Protection.

## WHO ARE CPS?

We know the importance of workplace productivity and transformation, which is why we help our clients reach their business objectives by supporting their journey to digital transformation.

Underpinned by Microsoft technologies, our consultants take pride in delivering tangible technology solutions that solve both technical and business issues.

We don't believe in a 'one size fits all' approach. Our consultants spend time with clients to appreciate their current IT landscape and what might need to change, adapt or evolve to meet business goals and directives.

**To find out how we can support you on your journey, contact us today.**
